

# BIZL Bosch Internet Access to the Monitoring Center

Communication Center

## Why BIZL?

What happens when the person to be contacted in case of emergency is on holiday or if you have to extend your closing hours because of your annual stocktaking?

With only a few clicks you can retrieve your log and change closing hours and action plans.

**You save time and effort and you are freed up to concentrate on other business. We'll look after the rest.**

You too can easily combine safety and flexibility. Register now!

# BOSCH

## What is BIZL?

With BIZL, you have direct access to your data registered at the central computer of the Monitoring Center. Hence, you are able to retrieve all security relevant object data all by yourself.

This internet portal is designed in order to facilitate an easy, flexible and safe object management.

Two independent passwords are required, an SSL connection (Secure Socket Layer) and two firewalls feature a very high security level.

## The login.

- You input [www.bizl.de](http://www.bizl.de)

- You log in with your user name and internet password

- You are called back and asked to put in a further PIN number on your (mobile) phone

- You're logged in now!

## BIZL – Basic Essentials.

**BIZL is safe, easy-to-handle and can be accessed everywhere. It facilitates the object management and offers you a high level of flexibility.**

You are able to

- retrieve action plans and logs
- access the names of the contact persons to be called in case of emergency and change them temporarily or generally
- access and change closing hours temporarily, generally or for a specific day
- send a short message directly to the Monitoring Center

In order to make object management even more comfortable, you can designate either another person or yourself as supervisor. This person will be allowed to input 10 further users responsible for the object administration.

**The precondition for using this service is an internet-compliant PC loaded with Microsoft Internet Explorer (Version 5.0 at least) or a compatible browser, a mobile phone or a multi-channel-dial phone\* and your registration!**

**Have a look now on our Extranet side [www.bizl.de](http://www.bizl.de) and log in as a guest.**

The guest login offers you all the functionalities of a real login, by merely using test data. Just simply test it and find out the advantages of BIZL.

\* The phone used must be multi-channel-dial operational (MFV). If the telephone is connected to a telephone system, the multi-channel-dial function has to be activated.

## How safe is BIZL?

**Bosch offers a high security level for your data:**

BIZL utilizes an SSL-connection like it is commonly used for online-banking.

For an even higher safety, a further password is required by choosing an independent communication channel (mobile/phone).

Furthermore, the central computer of the monitoring center is protected by a firewall ready to block any unauthorized requests.

All this is to guarantee that only you can look into your data.
